

PABLO MENDOZA

(754) 801-1449 — linkedin.com/in/pablo-c-mendoza — pablocmendozab@gmail.com — github.com/PabloMCodes

EDUCATION

University of Central Florida

Expected Graduation: August 2027

Bachelor of Science in Computer Science

GPA: 3.578/4.0

Coursework: Data Structures & Algorithms (I & II), Algorithms for Machine Learning, Systems Software, Security in Computing, Discrete Structures, Computer Logic & Organization, Object-Oriented Programming

Honors and Distinctions: Florida Bright Futures Award

Affiliations: Society of Hispanic Professional Engineers (SHPE), Knight Hacks

TECHNICAL SKILLS

Programming Languages: Python, Java, TypeScript, JavaScript, Scala, C, SQL, HTML/CSS

Frameworks & Libraries: FastAPI, React, Next.js, GraphQL, Prisma, YOLOv8, MediaPipe

Developer Tools & Technologies: Git, GitHub, Docker, CI/CD, SQLite, Splunk, Thrift, WebSockets

WORK EXPERIENCE

National Aeronautics and Space Administration (NASA)

Software Engineering Intern — Kennedy Space Center

June 2026 - August 2026

- Developed and delivered a full-stack operations analysis application using **React, FastAPI, Python, and SQLite** to support payload and science experiment processing workflows.
- Designed **REST APIs and asynchronous job architecture** in FastAPI for long-running analyses, implementing persistent job state, progress tracking, error handling, and background execution.
- Integrated an **AI-assisted analysis workflow** into the application, connecting backend processing services with structured inputs, persisted results, and frontend status updates.
- Engineered the application for **fully local operation** while structuring the system for straightforward transition to **hosted deployment and role-based access control** upon approval.
- Nominated for NASA's **Shining Star** recognition for contributions and performance during the internship.

Credit Karma

Software Engineering Intern — User Management Team

May 2025 - August 2025

- Shipped production upgrades to the security settings platform used by **120M+ users**.
- Migrated authentication functionality from a legacy monorepo into **Scala microservices**, extending GraphQL resolvers and service connectors.
- Designed and enforced database schemas and validation rules to mitigate **SQL injection** risks.
- Built **React + TypeScript** interfaces integrated with backend services through **GraphQL APIs and Thrift RPCs**.
- Validated changes with **unit and integration tests**, resolved CI failures, and monitored staged **Kubernetes** rollouts and service health with Splunk.

PROJECTS

LockedIn — Next.js, FastAPI, YOLOv8, MediaPipe, Prisma, WebSockets, NextAuth

- Built a full-stack AI productivity platform that uses **computer vision** to detect user distractions during focus sessions.
- Developed a **FastAPI + Python** inference pipeline and WebSocket communication layer for real-time activity detection and application updates.
- Designed a **Next.js** analytics dashboard for focus tracking, session insights, authentication, and social leaderboards.

StudySpot — React Native, FastAPI, Python, PostgreSQL, Google Places API

- Led a 4-person team over 3 months to develop a full-stack study-location platform with interactive maps, location-aware check-ins, and live availability scoring.
- Built a **Google Places API** script that searched across multiple geographic areas and deduplicated results by place ID to increase location coverage and avoid unnecessary API requests.
- Distributed the React Native app through **Apple TestFlight** for internal testing and user feedback.
